

Topaz FPGAs

When you are ready to go big, you need a device that is just right for volume production. Topaz FPGAs combine an efficient architecture with the features and protocols commonly used today (such as PCIe Gen3, MIPI, LPDDR4, and LVDS), so you can go big and still have room to innovate. Carefully designed to pack more logic into the XLR cells, the Topaz architecture gives you more room to innovate and more logic to add new features. Topaz FPGAs are available in a wide range of BGA packages that are easy to integrate into your system. Additionally, you can easily migrate from Topaz to Titanium FPGAs when you need to upgrade your design's performance or need more logic.

Quantum® Compute Fabric

Topaz FPGAs feature our innovative Quantum[®] compute fabric on an efficient, low-power, 16 nm process node. With this fabric, the Efinity software can pack more logic into the XLR cells, which means you can fit even more logic into the FPGA. Positioned for volume production applications, Topaz FPGAs let you do more for less.
